The Latest in Fueling Technology

*How does technology play a role in fueling?
It allows you to run your fleet more efficiently.
FFM's progressive technology enables you to:*

- ❖ **Set limits for your fleet.**
- ❖ **Determine the time of day and days of the week your drivers fuel.**
- ❖ **Set the amount of transactions per day.**
- ❖ **Establish product limits that meet your fueling requirements.**

Real Time Information

FFM works with real time information that allows us to determine where your vehicle has just fueled. With a simple keystroke, immediate lock-out of cards reduce — if not eliminate — the misappropriation of fuel usage.

Controls with Flexibility

What if you've restricted a driver from fueling after 5:00 pm and you need to extend the time?

With FFM, you set the controls. Just give us a call or go online, and the profile or card status will be updated immediately. There is no need to cancel a card and wait for one to be reissued. The card stays where you need it — in the driver's hand.

Total Fuel Management

We offer detailed invoices including card number, driver, date, fuel grade and amount of fuel purchased.

Odometer and individual vehicle numbers are also available. The fuel management report calculates the MPG (miles per gallon) for each vehicle to assure that all the fuel purchased is used to run your vehicle.

Free Transactions, Cards and Statements

Does your current fuel provider charge you for your transactions? Do you pay for your fuel statement or for your cards?

With FFM you only pay for the fuel you purchase.

Non-Stop Service in Any Situation

With our business continuation plan, FFM can weather any storm or hurricane without interruption.

We have the equipment and procedures in place to make sure your trucks stay on the road, keeping your business running smoothly, no matter what the conditions are.
